

ZipBolt®

Handrail Attaching System

The First Gear Driven Rail Bolt

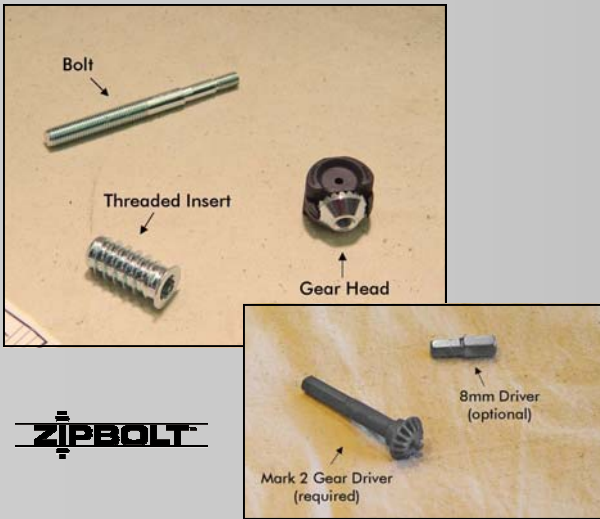

The ZipBolt® - Rail Bolt uses the same boring configuration used by stair builders for decades with - one - *very* big difference. This system utilizes a heavy-duty threaded insert, rail bolt and a *gear driven* nut assembly that simplifies the process of attaching (handrail to rail fittings) & (handrail to newel posts) together. Using the Mark II Gear Driver accessory, the installer no longer is trying to struggle to fit a wrench into a 1" hole. The Gear Driver can be used in a standard ratchet style handle.

Fitts

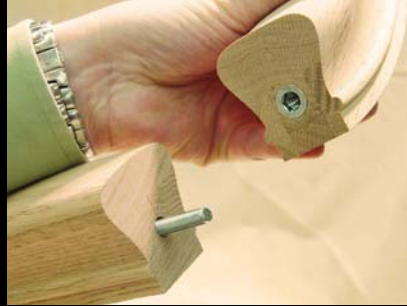

Revolutionary New Hand Rail Attaching Hardware

Little has changed throughout the years, simplifying the way handrail and fittings are attached. This innovation - to a process deemed one of the most "antagonizing" in stair installation, will save you time and money.

simple | cost effective | innovative

*Abridged installation for space constraints of page

- Zip-Bolts® work on handrail to fittings connections, as well as handrail to newel post connections. Other products in the industry—will not.
- Zip-Bolts® are only a fraction of the cost higher than standard rail bolts.
- Works with Post to Post & Over the Post Handrail Installations.
